About Me

I am an aspiring Software Engineer with a focus on web development and expertise in MERN stack tools. Proficient in creating responsive and dynamic applications using modern technologies like React, Node.js, Express.js, and MongoDB. I am passionate about building scalable and user-friendly solutions while continuously learning and enhancing development skills.

Education

12/2021 – 11/2023
Ilaro, Nigeria

Computer engineering | OND Federal polytechnic Ilaro

- Developed a strong understanding of both **hardware** and **software** integration.
- Collaborated on team projects to build and troubleshoot **computer networks**.

Certificates

01/2024 – 09/2024
Lagos, Nigeria

Front-end web development New horizons Nigeria

- Mastered **HTML**, **CSS**, **JavaScript**, and **React.js** to build dynamic and responsive user interfaces.
- Created projects like an **e-commerce** site and a **Qr code** app using **Tailwind CSS** and **REST APIs**.
- Learned **Git/GitHub** for version control and collaborative development.
- Enhanced skills in debugging, performance optimization.

01/2025 – present
Lagos, Nigeria

Front-end web development New horizons Nigeria

Currently learning backend development, focusing on building scalable **server-side applications** and working with **databases** and **APIs**.

- Gaining hands-on experience with technologies like **Node.js**, **Express.js**, and MongoDB to design and develop **RESTful APIs**.
- Implementing **authentication**, **data modelling**, and server-side logic in backend projects.
- Proficient in using **Git/GitHub** for version control and collaborative development.
- Enhancing skills in debugging, performance optimization, and deployment of backend applications.

Technical Skills

- **Frontend Development:** HTML, CSS, JavaScript (ES6+), React.js, Tailwind CSS, Responsive Design
- **Backend Development:** Proficient in Node.js and Express.js, with hands-on experience building RESTful APIs and server-side applications. Currently enhancing skills through a bootcamp program.
- **Database Management:** MongoDB (NoSQL), REST APIs
- **Version Control:** Git, GitHub
- **Build Tools:** Proficient in Vite and npm, including publishing a custom package (`create-tailwind-react-vite`) to streamline project setup and configuration.
- **Other Tools & Libraries:** html5-qrcode, Axios, Chart.js, AOS,
- **Development Focus:** MERN stack, debugging, performance optimization, and scalable web solutions

Projects

09/2024 – 12/2024
Lagos, Nigeria

Konga.com website clone

Link: <https://konga-clone-two.vercel.app/>

- Implemented dynamic product quantity adjustment on the cart and single product pages using increment/decrement buttons.
- Ensured persistent cart count across all pages, updating the “My Cart” button in the Navbar in real-time.
- Developed a simulated order tracking system that displays order details for valid tracking numbers and error messages for invalid entries.
- Built a real-time order summary in the shopping cart, dynamically updating the total price and item count as products are added, removed, or updated.

01/2025 – 01/2025
Lagos, Nigeria

Qr code scanner & Generator

Link: <https://qr-code-scanner-generator.vercel.app>

- Developed a QR code generator that dynamically creates QR codes from user-input text.
- Implemented a download feature to save QR codes as PNG images.
- Added a clear functionality to reset the input field and remove the generated QR code.
- Utilized React and the qrcode.react library for seamless QR code generation and rendering.
